Invitation

We Cordially invite you to CRITIC 2017, Hyderabad- The Pearl City of India

The foundations of scientific innovation and progress lie in curiosity, suspicion and enquiry. The art of practicing critical care medicine dwells in ability to integrate and individualize the current protocols. There is considerable overlap and conflict between these two fundamental elements.

Randomized trials and clinical data have been questioned many a time to be lagging to "collective experiences" and novel therapies. Emerging evidences that challenge the current guidelines, deconstruction of current algorithms and innovative technologies will be the tools of engagement in CRITIC 2017.

This conceptual event CRITIC 2017 will enable critical care physicians in understanding such technical innovations, novel therapies and those concepts challenging existing clinical practices with defensible rationale. Modus operandi would be to stimulate thinking and perhaps throw light towards new directions with a potential for more productive research and creating environment for such conceptual modification in clinical practice.

Analytical and critical knowledge admirers of critical care medicine will lead us in understanding the controversies and fallacies in ongoing practices like a 'Manthan' of minds, at the 'ConfeRence on Innovative Thinking in Intensive Care' - CRITIC 2017.

With Warmest Regards and Best Wishes,
